### General Activity Items (3)

There is often some difficulty in establishing the boundaries between work and leisure activities on farms and this can reduce the usefulness of a general activity classification. It has been decided to include the classification to allow for further research into some of the less well studied areas of farm safety, such as education and sport. It is envisaged that in the majority of cases, work will prove to be the defining activity.

<b>3.1 Role in Event</b>	Operator/Controller
	Passenger
	Bystander
	Not Applicable

	Still enquiring

<b>3.2 General Activity</b>	Sports activity
	Leisure activity
	Working for income
	Non-paid farm work
	Bystander to work
	Being cared for
	Other specified activity
	Unspecified activity

<b>3.3 Work Relatedness (Coroner)</b>	Work related
	Not work-related
	Still enquiring
	Unknown

*Definition:* This definition is provided by the coroner, however there are multiple cases where people that are not in paid employment but are physically involved in work, designated as non-work related cases. This under numerates the true number of work-related cases.

<b>3.4 Work Relatedness (ACAHS)</b>	Work related
	Not work-related
	Still enquiring
	Unknown

*Definition:* Applies to a person who is fatally injured as a result of, or who died of a fatal condition caused by exposure to their own or another's work activity or work factors. Deaths of persons who were not working, but who died as a result of exposure to the work activities of others ("bystanders"), are included in this definition. Work relatedness is determined via review of attached documents (police reports and coroners' findings) in combination with review of activity codes assigned by NCIS.

<b>3.5</b>	<b>Event Description</b>	Free Text Field
------------	--------------------------	-----------------

*Field Details:* A summary of the event details is devised from media reports upon initial notification of incident. This summary assists in initial case matching and searches that are carried out by AgHealth within the NCIS. This is cross-referenced with details in coronial findings when available and updated accordingly upon case closure. The event description also allows assessment of the mechanism for events e.g. crush by animal/object, drowning, electrocution, fall, rollover, runover etc pertinent to the event.

<b>3.6</b>	<b>Toxicological Results</b>	Positive to Alcohol
		Positive to Drugs
		Positive to Alcohol and Drugs
		Negative to Alcohol and Drugs
		Still Enquiring
		Not Electronically Available
		Not Performed
		Unknown

*Field Details:* Involvement of alcohol and/or other drugs as a contributory factor to injury is determined by the Coroner. It is ascertained by review of autopsy, toxicology and coroners' findings reports when available.

## **Agricultural Context/ Work Phase (4)**

While the classification of industry is of importance for injury prevention on farms, it is generally desirable to be able to define work phase in which the injury event occurred. This will allow more accurately assessment of the injury experience of people involved in mixed farming activities, as well as to define the risks associated with production activity.

It should be remembered that these groupings are *activity* groups not agents of injury. Within the transport group for instance, the limited categories are designed as they are to highlight the current areas of transport related concern. Other concerns such as motor vehicles will be highlighted in the agent category.

Household activity has been included in an attempt to ascertain any increased home based risks to farm residents.

## Agent (5)

The agent of injury classification is a step forward in farm injury surveillance methods for two significant reasons. Firstly it is the most comprehensive list of potential farm injury agents available. Secondly the agents are classified in logical groups that will aid in the coding process e.g Agent Category = Farm Structure & 1aAgent = Dam. The list of agents has been compiled by reviewing agents considered in other studies, by consultation among staff at the Australian Centre for Agricultural Health and Safety and within the Farmsafe network.
